

WHAT IS CLAIMED IS:

1. A speaker bracket, comprising:  
a first half; and  
a second half;  
wherein the first half is rotably connected to the second half, so as to define an axis about which the first half and second half may rotate with respect to one another.
2. The speaker bracket of Claim 1, wherein the first half is adapted to rotate to and from an unfolded position.
3. The speaker bracket of Claim 2, further comprising a spring to bias the rotation of the first and second halves.
4. The speaker bracket of Claim 3, wherein the spring is configured to bias the rotation of the first and second halves towards the unfolded position.
5. A method of mounting a speaker in a mounting surface, the method comprising:  
folding a bracket;  
inserting the folded bracket through a mounting hole in the mounting surface;  
unfolding the bracket; and  
mounting the speaker to the unfolded bracket.
6. The method of mounting a speaker of Claim 5, further comprising the step of spring loading the bracket to assist in the unfolding step.
7. A folding speaker bracket that rests against the backside of a mounting surface, wherein the bracket is hinged at one or more locations along the approximate midpoint of said bracket.
8. A speaker bracket, comprising:  
a speaker mounting portion having a first half, a second half and a hinge connecting the first half to the second half;  
a first bracket support attached to the first half of the speaker mounting portion; and  
a second bracket support attached to the second half of the speaker mounting portion.

9. The speaker bracket of Claim 8, further comprising a spring to bias a relative rotation of the mounting portion halves.

10. The speaker bracket of Claim 9, wherein the spring is configured to bias the rotation of the first half of the bracket portion towards an unfolded position.

11. A speaker bracket that rests against the backside of a mounting surface, comprising:

a speaker mounting portion;  
at least one support arm; and  
means for folding said bracket.

12. The speaker bracket of Claim 11, wherein the means for folding said bracket comprises a pair of pin joints.

13. The speaker bracket of Claim 12, wherein the pin joints comprise fasteners selected from a group consisting of rivets, screws and bolts.

14. The speaker bracket of Claim 11, wherein the means for folding said bracket comprises the use of flexible material.

15. The speaker bracket of Claim 11, further comprising means for returning said bracket to an unfolded state.

16. The speaker bracket of Claim 15, wherein said means for returning said bracket to an unfolded state comprises a spring.

17. A folding speaker bracket that rests against the backside of a mounting surface, comprising flexible material whereby the bracket is adapted to fold and then unfold.
